Notes

The domain of R is:

$$\text{Dom}(R) = \{a \in A \mid (a, b) \in R\}$$

Definition 5 Let R be a relation from A to B and let S be a relation from B to C . Then the composition of S and R is the relation SR from A to C .

$$SR = \{(a, c) \in A \times C \mid \exists b \in B (a, b) \in R \wedge (b, c) \in S\}$$

.

Properties of relations

Let R be a relation on A . ($R \subseteq A \times A$)

R is called reflexive if for every $a \in A$.

$$\begin{aligned} & aRa \\ & \forall a \in A (a, a) \in R \end{aligned}$$

R is called irreflexive if for every $a \in A$,

$$\begin{aligned} & \neg aRa \\ & \forall a \in A (a, a) \notin R \end{aligned}$$

R is called symmetric if for every $a, b \in A$

$$\begin{aligned} & aRb \rightarrow bRa \\ & \forall a \forall b (a, b) \in R \rightarrow (b, a) \in R \end{aligned}$$

R is called asymmetric if for every $a, b \in A$,

$$aRb \rightarrow \neg bRa$$

$$\forall a \forall b (a, b) \in R \rightarrow (b, a) \notin R$$

R is antisymmetric if for every $a, b \in A$,

$$(aRb \wedge bRa) \rightarrow (a = b)$$

$$\forall a \in A \forall b \in A ((a, b) \in R \wedge (b, a) \in R) \rightarrow a = b$$

R is called transitive if for every $a, b, c \in A$,

$$(aRb \wedge bRc) \rightarrow aRc$$

Examples

The relation of less than or equal to, \leq , on \mathbb{R} .

1. reflexive: $\forall a \in \mathbb{R} a \leq a$
2. symmetric: $\forall a, b \in \mathbb{R} a \leq b \rightarrow b \leq a$
3. antisymmetric: $\forall a, b \in \mathbb{R} (a \leq b \wedge b \leq a) \rightarrow a = b$
4. transitive

The relation of equality, $=$, on \mathbb{R}
